

TRACS Evaluations

Supporting A&D in Africa

TRACS provides a range of services to support Acquisition and Divestment (A&D) opportunities. Our activities in Africa span 25 years and 24 countries, working both onshore and offshore. We evaluate single assets or portfolios and will highlight technical and non-technical risks as well as commercial and strategic opportunities.

SERVICES

Under the banner of TRACS Evaluations we provide a broad range of services to support A&D opportunities:

- Asset and Portfolio Valuations
- Competent Person's Reports
- Due Diligence
- Reserves Audits

We use integrated teams of subsurface and commercial experts to carry out resource valuations and classifications. Evaluation teams can be supplemented by drilling and facilities engineers where necessary. Our multi-disciplinary teams have the breadth and depth of knowledge to provide the technical and economic assessment needed to support the Due Diligence process. This approach is aimed at providing a comprehensive assessment of the technical and commercial risks and opportunities. We also provide independent advice to buyers and brokers on less tangible aspects such as operator competence, partner issues and other opportunities within the region.

EXPERIENCE

Our technical and commercial experts have more than 25 years' experience in the E&P industry. From North Africa, throughout West Africa and down to South Africa, we have the expertise to progress your opportunity in the A&D market.

"We required subsurface support to understand and evaluate several complex, deep water turbidite fields. TRACS provided us with a thorough analysis of the subsurface issues. Their knowledge and experience of such reservoir types greatly helped the evaluation.

Project Manager, Reservoir Characterisation, GNPC.
