

Operations Geology

Designed for:

All geoscientists, specialists and engineers who are involved in well planning and execution.

Duration (days)

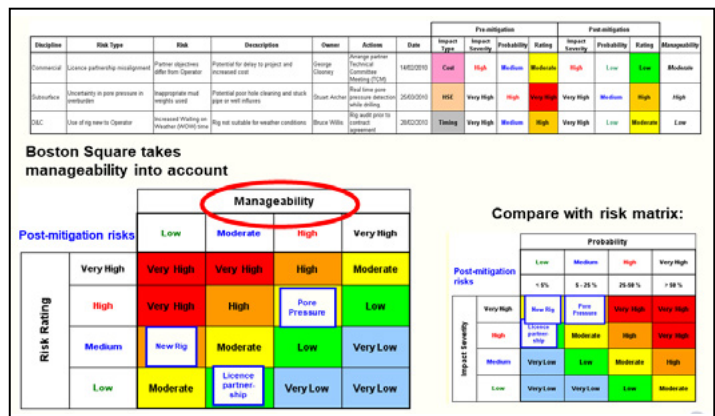

Learning Level:

The course details the planning and execution of a well from an operational geoscience viewpoint giving a broad understanding of what geological operations entails including practical exercises and role play. Few professionals in the industry gain real practical experience and even if they don't work in operations it's critical that they have an understanding of the practical role of operations geoscientists.

Learning objectives:

- Understand and apply the practices and procedures of planning and executing wells.
- Recognise the input from a range of disciplines into the well planning and execution process and how this can impact on operations geoscience.
- Develop written and verbal communication strategies for successfully managing integrated teams of varying disciplines.

Operations Geology continued

Course Content:

Day 1

- Understanding the role of the operational geoscientist
- Target identification, definition and selection
- Preliminary well design
 - Hazard and risk identification and mitigation
 - Basic well construction
 - Well option selection

Days 2 and 3

- Detailed well design
 - PPFG, define casing points and mud weights
 - Geomechanics
 - Formation Evaluation planning
 - Operational decision trees
 - Regulatory compliance
 - Partner engagement
 - Subcontractor engagement
 - Documentation and reporting
 - Day 3 Overnight real time exercise; Drilling the 12 1/4" section and calling section TD at the 9 5/8" casing point

Day 4

- Well execution
 - Drilling operations
 - 24 hour monitoring and real time decision making
 - Communications with simulation exercises
 - Formation Evaluation data
 - Geosteering
 - Day 4 Overnight real time exercise; Drilling the 8 1/2" horizontal reservoir section to final TD

Day 5

- Learning
 - Measurement of performance against objectives
 - Recording subsurface understanding and geological related drilling lessons learned

Course Duration:

Duration is 5 days

Courses available from this series:

Drilling Awareness
Introduction to Drilling
Well Productivity Awareness School (WASP)
Completion Design
Completion Practices
Well Management
Tubing Stress Analysis
Artificial Lift
HPHT Drilling
Integrated Well Planning & Drilling Operations
Operations Geology
Maximising Well Productivity in a Low Oil Price World
Stuck Pipe Prevention
Well Integrity Management

Course Tutor

Christine Telford

Main Series tutoring: Wells

Industry experience: over 30 years, operations geology

Career background: Independent Consultant, Halliburton, University of Aberdeen and AGR TRACS

Personal: Coach and mentor to industry personnel. Guest lecturer on University of Aberdeen Integrated Petroleum Geoscience MSc Course
